

KENDOX INFOSHARE FOR ORACLE NETSUITE

Convenient integration into ORACLE NetSuite with transparent access

ORACLE NetSuite is a cloud-based business software suite that includes financial management, enterprise resource planning (ERP), customer relationship management (CRM), and e-commerce. It provides companies with an integrated platform for automating and optimising business processes. **ORACLE NetSuite** helps companies grow, improve efficiency, and provide real-time business insight for informed decision making.

In interaction with **ORACLE NetSuite**, **Kendox InfoShare** ensures the legally compliant management of all incoming and outgoing documents. The document archive is operated exclusively in the cloud - just like **ORACLE NetSuite**. All documents are in safe hands in certified data centres. There is no need to invest in expensive archiving infrastructure, and your staff can focus on core processes. Access to the archived documents is always guaranteed - either completely transparently integrated in **ORACLE NetSuite** or via other browser-based applications such as the **Kendox InfoShare** Web Client.

Convenient search functions ensure that users can find the documents and files they need quickly and easily. And with the completely open interface collection - the **Kendox InfoShare** Web API - almost all functions of the **Kendox InfoShare** Cloud Archive Service are available for individual requirements. This ensures that document archiving can be quickly and easily integrated into existing business processes and specialist applications.

INTEGRATED INVOICE RECEIPT PROCESSING

In most organizations, the review and approval of incoming invoices is a time-consuming and costly process. **Kendox InfoShare** for **ORACLE NetSuite** optimizes your invoice processing. With **Kendox InfoShare**, incoming invoices are automatically processed in a structured manner and approved via an individually configurable approval workflow. The transfer of pre-accounting information to **ORACLE NetSuite** after approval ensures a smooth processing flow, allowing approved invoices to be posted and released for payment quickly and efficiently:

RULE-BASED PROCESSING

Rule-based, process-driven processing ensures a high level of transparency, significantly improved responsiveness and short processing times, allowing full use of cash discounts. Receipts can be approved at any time on a mobile device, allowing invoices to be processed across multiple locations without media disruption.

- Paper invoices
- Electronic invoices attached to e-mails (PDF)
- Invoices in ZUGFeRD format
- Invoices in XInvoice format

ARCHIVING OF OUTGOING DOCUMENTS AND EXTERNAL ATTACHMENTS

ARCHIVING OF OUTGOING DOCUMENTS & EXTERNAL ATTACHMENTS

The documents generated by **ORACLE NetSuite** (outgoing invoices, purchase orders, delivery notes, etc.) can be automatically archived in **Kendox InfoShare**. Using **Kendox InfoShare's** open interface (API), any documents from other applications can be transferred directly into the archive with the corresponding index values. In addition, documents archived in this way can be automatically assigned to the corresponding files without manual intervention. For example, external attachments that have been uploaded to **ORACLE NetSuite** and saved with a purchase order can be automatically archived via **Kendox InfoShare** and provided with the necessary contextual information (metadata). This way, they are stored securely with the associated documents and are available at any time.

ACCESS TO THE DOCUMENTS

Documents archived in **Kendox InfoShare** can be opened quickly and easily directly from **ORACLE NetSuite**. Document access is transparent - there is no need to manually switch to another application. Alternatively, users can access files and documents via the **Kendox InfoShare** Web Client and other browser-based applications. **Kendox InfoShare** can be used to manage not only incoming invoices or credit notes, but also all other incoming and outgoing documents, such as outgoing invoices, delivery notes, receipts or material withdrawal documents. Depending on the application scenario, documents can be transferred manually, semi-automatically or fully automatically in the background. Convenient tools are available for capturing incoming paper documents, helping users to efficiently digitise and index documents. Documents can then be accessed from **ORACLE NetSuite** via an integrated, context-sensitive interface or via the search function integrated into the **ORACLE** interface.

CONVENIENT CAPTURING TOOLS

Kendox InfoShare provides tools for digitising individual paper documents (workstation scanning) as well as entire batches of documents (batch scanning). Documents can be automatically separated into batches using either barcodes or separator sheets.

The screenshot displays the ORACLE NETSUITE interface. The top navigation bar includes tabs for Bills, Payments, Transactions, Lists, Reports, Analytics, Customization, Documents, Setup, Administration and Controls, SuiteApps, and Support. The main area shows a list of transactions with columns for Edit, View, DMS-Integration, Internal ID, Date, Company Name, Name, Print, Document Number, Transaction Number, Account, Status, Memo, Currency, Amount (Foreign Currency), Amount, Mix Operation Type, Import Permit No., and Export. A detailed invoice for Möbel Walter is shown on the right, including the company name, address, contact information, and a table of items with their descriptions, quantities, and prices.

Pos	Artikel	Bezeichnung	Menge	ME	Preis/ME	Gesamt
1	96123001	Hängeschrank Grotte 1 (Schulbank) (grün)	10,00	Stk	55,00	550,00
2	96123001	Hängeschrank Grotte 1 (Schulbank) (grün)	10,00	Stk	60,00	600,00

DIGITALLY SIGN RECEIPTS AND DOCUMENTS

With **Kendox InfoShare** Cloud Signature Services, handwritten signatures are a thing of the past. Once digital signatures are integrated into your processes, you can eliminate the need for multiple printouts, manual distribution of documents and subsequent scanning. Contracts and agreements can be completed much more quickly and business can be conducted more efficiently. By using digital signatures and seamless processes, you can also significantly increase employee productivity and save money.

UNIVERSALLY USABLE

No matter what processes or documents require a binding signature, the Cloud Signature Service can be integrated with all **Kendox** solutions. Whether in Contract Management, the Digital Personnel File, Fleet Management or any other **Kendox** solution.

COMPREHENSIBLE AND TRANSPARENT

Digital signature approval and signature logs are automatically archived and linked to the original document. This ensures that you can always trace who signed which document and when. And you will always have an overview of where your document is in the signature process.

FLEXIBLE PROCESS DESIGN

Documents and receipts are transferred directly from **Kendox InfoShare** to the signature service. The process, sequence and rules for the signature and approval process are defined and then carried out with **Kendox InfoShare**. Once digitally signed, documents are archived in Kendox InfoShare in a legally compliant, audit-proof and unalterable form.

LEGALLY SECURE INSTEAD OF "QUITE" SECURE

Depending on the signature provider, electronic signatures are compliant with the EU's eIDAS¹ regulation. This ensures the legal validity of electronic signatures in court: they are almost equivalent to paper signatures².

DIGITAL CONTROL OF DOCUMENTS

No matter what processes or documents require a binding signature, the Cloud Signature Service can be integrated across all **Kendox** solutions. Signing offers and contracts, approving orders and invoices, confirming receipt of information and much more can be done digitally with the Cloud Signature Service.

THE FOLLOWING SIGNATURE PROVIDERS ARE CURRENTLY INTEGRATED:

- DocuSign
- ActaSign
- AdobeSign
- Skribble

¹ eIDAS: Electronic Identification, Authentication and Trust Services
² For most transactions, a simple electronic signature is sufficient; in certain rare cases, a qualified electronic signature (QES) is required (see also §126a BGB).

Overcrowded filing cabinets, time-consuming document storage and tedious searches are a thing of the past. **Kendox InfoShare** digital files, integrated with **ORACLE NetSuite**, make paper files history. All documents - contract, customer, supplier, fleet or CRM documents, etc. - are digitised and made available centrally and at any time in an audit-proof archive.

ONE TECHNOLOGY - MANY APPLICATIONS

Kendox InfoShare digital files are available in a range of versions to assist you with the digitalisation of your administration and management processes. Currently available:

- **Business partner files:** Organise and manage your supplier and customer documents, such as outbound ERP documents (e.g. delivery notes, invoices or correspondence).
- **Contract management:** Centralised contract management with features such as document review processes, deadline monitoring, escalation management, digital signatures or document generation with **Kendox InfoShare** template management.
- **Personnel files:** Structured and clear management of your personnel files and all related documents, monitoring of deadlines (e.g. driving licence test, renewal of employee certificates) - with or without connection to **ORACLE NetSuite** and always legally compliant.
- **Fleet files:** Intuitive and lean file solution for fleet management with the proven features of **Kendox InfoShare**

EFFICIENT IMPLEMENTATION - THANKS TO DIGITAL FILE TEMPLATES

Pre-defined file templates, such as contract, fleet or business partner files, make it possible to implement solutions quickly and efficiently, as the file solutions are standardized and still have room for your individual requirements and the mapping of your processes.

INTEGRATED TEMPLATE MANAGER

The Office integration of the digital file allows new documents to be created directly in the file using the template manager and based on text modules. The new document is automatically assigned to the correct file.

CENTRAL MANAGEMENT, GLOBAL ACCESS

Access to documents from any location is a major benefit for distributed organizations. Documents and information are managed centrally in the digital file but can be accessed quickly and easily from anywhere at any time. Detailed permissions also ensure that only authorized users can access sensitive information, enforcing both legal and internal privacy policies.

TEMPORARY DOCUMENT SHARING

Individual documents or entire files can be given temporary access to another employee or their manager. Access is automatically revoked after a pre-defined period.

AUTOMATIC FILE CREATION AND DOCUMENT FILING

Business partner files can be created automatically from **ORACLE NetSuite**. The master data of the customer or supplier is attached to the digital file cover as information. This allows structured access to the digital files without having to use the ERP. Both documents generated within **ORACLE NetSuite** (e.g. customer invoices) and documents from external systems (e.g. payroll) can be automatically filed in the appropriate customer or business partner file via the available interfaces.

LEGALLY COMPLIANT ARCHIVING

Documents in the digital file are archived in a legally compliant manner, changes to the documents are traceable and the processing steps are also logged. This reassures the department that everything is under control.

The **Kendox InfoShare** Web Client can be used internationally and is currently available in the following languages:

CURRENTLY AVAILABLE

- German
- English
- French
- Italian
- Spanish
- Portuguese
- Dutch
- Japanese
- Mandarin
- Polish

Other languages are in preparation and available on request.

BENEFITS

- Comprehensive standard solutions for the management of ERP receipts and sensitive documents
- Convenient integration in **ORACLE NetSuite** with transparent access to files and documents
- Individually configurable processes and filing plans
- Mobile access to documents with integrated document viewer
- Expandable to enterprise-wide document management
- Legally compliant storage and audit-proof archiving
- Professional operation in certified data centers
