

KENDOX IFINE THE BASE FOR EFFECTIVE COLLABORATION

Kendox iFine brings structure and speed to your cross-departmental workflows

In modern businesses, efficient cross-departmental processes are the key to faster growth and competitive advantages. Delays caused by manual coordination, confusing document flows, or a lack of transparency prevent many organizations from reaching their full potential.

Kendox iFine offers a solution that not only accelerates your collaboration but also takes the quality and efficiency of your processes to a new level. Whether it's automated invoice processing, order workflows, payment approvals, or the delivery of electronically transmitted notifications - the applications for **Kendox iFine** are virtually limitless.

The image displays three tablets showcasing the Kendox iFine software interface. The top tablet shows a 'To-do list' with columns for activity, status, date, and amount. The middle tablet shows a 'Zahlungsfreigabe' (payment release) screen with fields for customer, invoice, and payment details. The bottom tablet shows a document view for 'XCON_04' with company logos and a table of payment items.

CUSTOMIZED MODELING

Kendox iFine enables model-based mapping and customization of your business processes - tailored specifically to your organizational structure and company-specific workflows. Document flows, decision rules, and escalation paths can be defined flexibly. This ensures that information is always presented to the right people at the right time.

AUTOMATED TASK ASSIGNMENT

With Kendox iFine, you can organize your processes entirely digitally and fully automatically. Tasks are assigned by the system, follow-up activities are triggered, and processing steps are documented - all without manual intervention. Thanks to integrated Robotic Process Automation (RPA) and configurable substitution rules, tasks don't pile up even when staff are absent. This allows you to increase your organization's responsiveness while reducing the workload on your teams.

ABSOLUTE TRANSPARENCY

Kendox iFine provides complete traceability across all digital processes - from initial entry to the completion of a process. All activities are logged in an audit-proof manner, ensuring that responsibilities and decision-making processes can be clearly traced at any time. The integrated "Track & Trace" function provides real-time insight into the current status of ongoing processes - for greater transparency, controllability, and compliance.

ANALYSIS AND EFFICIENCY

With Kendox iFine, you gain valuable insights into the performance of your digital processes. Customized reports identify bottlenecks, repetitions, or delays at an early stage. Based on this information, you can optimize operational workflows in a targeted manner and make data-driven strategic decisions - resulting in measurable efficiency gains and shorter turnaround times.

BENEFITS

- Full integration with financial accounting/ERP systems, including AS/400 and DKS
- Flexible adaptation to individual accounting processes
- Automated sub-ledger accounting, credit card, and fuel card billing
- Recurring tasks are managed digitally - reducing the workload on your teams
- Workflows, approvals, and escalations can be flexibly adapted to your organization
